

(A) Original PR Description
Original Text "Possible fix for Lilylicious/ThaumicEquivalence#7" with issue-specific notes on custom EMC registration and item IDs.
Why It Fails Useful domain context is buried in narrative text; affected files and implementation changes are not separated.
Evaluation Judge: 3.5/5.

(B) Raw Zero-Shot Baseline
Summary Updates NormalizedSimpleStack to use unique item names instead of numeric item ids and refactors related mapping and serialization behavior.
Key Changes - Key NormalizedSimpleStack by itemName. - Store itemName and damage in NSSItem. - Use NormalizedSimpleStack keys in APICustomEMCMapper. - Mentions closing the pregen FileReader.
Evaluation Judge: 4.0/5.

(C) Full Diff-Grounded Approach
Summary Switches NormalizedSimpleStack to itemName/GameRegistry identifiers and updates mappers, JSON handling, lookup behavior, and file reading.
Key Changes - NormalizedSimpleStack uses itemName/GameRegistry identifiers. - APICustomEMCMapper stores NormalizedSimpleStack keys. - EMCMapper resolves Item IDs through Item.itemRegistry. - NSSJsonTypeAdapter writes itemName and damage. - PregeneratedEMC.read throws IOException and closes FileReader.
Evaluation Judge: 5.0/5.
